Day 1 | Challenge part 1

This chapter will be Project based. We will use our MySQL CodeReview database project - this will be our database.

The first thing you need to do is to create user-friendly GUI rendering. You should use Bootstrap elements to create GUI for this project. Come up with idea which data you would like to present and which pages (forms, tables) you need in your GUI part and create them.

Note: PHP-Pework day 1 is not covering database connection and data retrieval. Therefore, create your test data as multidimensional arrays based on your database design and test data, and use them for the rendering purposes.
